- To determine kPa, multiply psig by 6.89 and bar by 0.0689
- When valves with Hy-Lok Fitting end connections are connected to tubing, the working pressure of tubing must be considered in the calculation of total system working pressure
- Extreme temperature fluctuations may require packing adjustment

Sour Gas Service

- This service is provided to meet NACE Standard MR-0175 & MR-0103.

Testing

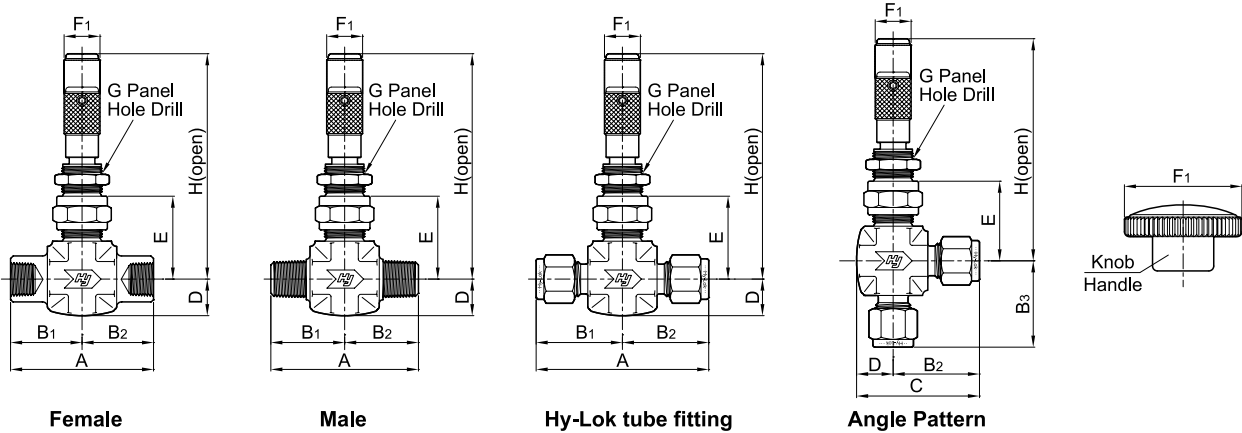

- Each valve is tested with nitrogen @ 1000 psig (69bar) to max. leak rate of 0.1SCCM.
- Hydrostatic shell test is performed at 1.5 times the working pressure.
- Optional tests are available upon request.

Cleaning and Packaging

- All metering valves are cleaned and packaged in accordance with Hy-Lok standard cleaning and packaging.
- A special cleaning and packaging are available as an option.
